*Re.: Request to immediately suspend ACM0013*

Dear Ms. Filzmoser,

Thank you for your letter dated 18 March 2010, which has been made available to the Board.

On behalf of the Chair, I inform you that the Board, at its 53<sup>rd</sup> meeting, revised methodology ACM0013 version 02.1 to ensure that emission reductions claimed are limited to those resulting from the higher efficiency of the power generation technology used in the project activity, as compared to the baseline. The Board further agreed to suspend the use of methodology ACM0013 version 02.1 by putting it on hold with immediate effect. Hence, the revised methodology ACM0013 version 03 is deemed effective 26 March 2010 (2400 hours GMT).

Please note that all interested parties may propose a revision to any approved CDM methodology or tool referred to in a methodology following regulations contained in the "Procedures for the revision of an approved baseline or monitoring methodology by the Executive Board". However, these procedures do not permit a request for revision through an unsolicited correspondence to the Board.

Yours sincerely,

Daniele Violetti  
Secretary to the CDM Executive Board
